

Sur-Lock™ **Exit Control Alarm Lock**

- **Multi-Point Deadbolt Lock**
- **All Steel Construction**
- **Secure & Code Compliant**
- **Hardened Steel Deadbolts**
- **Piercing 105 db Alarm**

LockNet's Sur-Lock provides control and security for exit doors in the most demanding of environments. Incredibly rugged, the Sur-Lock prevents unauthorized entrance, restricts unauthorized exit, and instantly provides emergency egress. With its built-in 105db alarm, the Sur-Lock is a powerful deterrent to insider theft while its two ½" hardened steel deadbolts – one deadbolt on the active side and one on the hinge side of the door – present a formidable obstacle to forced entry.

The Sur-Lock uses an extraordinary type of bolt keeper whose claw-like solid steel fingers securely fasten your door shut, while being flexible enough to tolerate many of the alignment problems that plague high use doors. An unauthorized exit results in the Sur-Lock's alarm sounding to alert management – an alarm that can only be reset by an authorized key. Once the key is removed, the alarm is fully armed to announce a subsequent unauthorized exit. The Sur-Lock opens easily and smoothly with fewer than 5 pounds of pressure – well within the limits of ADA requirements. A built-in non-resettable counter – that increments for each opening of the device – assists in providing you with exit accountability.

Sur-Lock's unique claw-like bolt keeper ensures positive locking of your door – it's even tolerant of the many alignment problems that plague high-traffic doors.

Each Sur-Lock comes with a passive deadbolt for use on the hinge side of your door to thwart attacks by removal of your door's hinge pins.

Applications:

- **Restaurants**
- **Supermarkets**
- **Retail Shops**
- **Drug Stores**
- **Discount Stores**

Sur-Lock™ Exit Control Alarm Lock

Specifications:

- Fits left & right hand doors 28" to 48" wide
